

Tom West

Software Developer

Bristol

[LinkedIn](#) | [GitHub](#) | [Portfolio Site](#)

Software developer with 2+ years of professional experience, seeking a role where I can provide immediate value by delivering high-quality, scalable solutions. I have a strong understanding of **TypeScript** and **C#**, and I am highly motivated to continue developing my technical skills whilst contributing to meaningful projects.

Work Experience - **Full-Stack Software Developer**, EMaC (March 2024 - April 2026)

Personal Achievements

- Core contributor to strategic platform refresh initiative that grew EMaC's maintenance plan business from **80,000 (2024) to 150,000 (2025)**.
- Wrote key features that contributed to **~£12m** additional revenue (double overall revenue).
- Platform capability was a critical enabler in securing major client wins, successfully passing due diligence where the previous solution would not have met security requirements.
- Wrote software for the Service Plan refresh aspects of our transformation, protecting **~£10m** revenue, where customers were demanding a more modern user experience.
- Independently delivered a feature enabling customers to highlight areas of vulnerability. This included designing a reusable list component with soft-delete functionality. Due to stakeholder appreciation, functionality was **scaled across all products** instead of the initially intended single product and the component was reused throughout the platform.
- Refactored and modernised the core search functionality, introducing category-based filtering to resolve production timeout issues under strong time pressure. This received widespread attention from management who praised the quality and swiftness of delivery.
- Recognised by QA team as an **exemplary developer** for clear communication and proactive documentation, using Jira and Miro to drive efficiency within the teams.

Skills and Responsibilities

- Demonstrated ability to learn new technologies quickly by learning TypeScript, C# and VB and writing impactful, production quality code **within 6 weeks**.
- Regularly developed and refactored complex SQL queries for large datasets, improving performance and reliability of core features, e.g. enhancing platform's search functionality.
- Excellent skills in identifying and resolving defects gained from working in a team dedicated to live issues for 6 months.
- Worked closely with stakeholders, gathering feedback to suggest technical approaches.
- Wrote readable and future-proof code to reduce tech debt and improve sustainability.
- Performed daily peer reviews, encouraging improvement across all levels and promoting a culture of clean code.
- Collaborated with QA to enhance testing coverage and discuss improvements to UX.
- Worked with Scrum and Kanban methodologies and have willingly participated across multiple squads to absorb business logic and support peers.
- Proficient in Git and Azure, leveraging CI/CD pipelines to automate deployments, while managing environments and branching strategies for fortnightly releases.

Systems Developer, Strata Service Solutions Ltd (May 2026 - Present), 12-month Contract

- Immediately began collaborating with stakeholders to develop customer-facing forms using low-code environments and database APIs, enhancing user experience through accessibility-focused design.

Trainee Software Developer, Northcoders (Oct 2023 – Jan 2024)

- Completed a 13-week intensive Software Engineering course which educated me in a diverse range of coding languages and solidified my technical skills and interest surrounding software engineering.
- Working regularly with new partners hugely strengthened my technical communication, adaptability and comfort in driver/navigator roles.
- Covering challenging new topics daily fostered my ability to quickly pick up new skills.

University Experiments, University of Bath (2019-2023)

- I wrote Python and C++ code that simulated the physics of a Kater's pendulum to calculate various associated parameters and code that compared images of the night sky to detect passing comets and used LaTeX to produce my report.

Technical Skills

Languages: C#, TypeScript, Visual Basic - applying Object-Oriented Programming principles.

Testing: Test-Driven-Development (TDD), xUnit, Jest, SuperTest, Performance Testing.

Front-End: HTML, CSS, React, React-Hook-Form, Next.js, Tailwind, Low-Code Environments.

Back-End: SQL, PostgreSQL, SSMS, Prisma, Supabase, seeding, migrations.

Dev Tools: Git, Copilot, Azure, Visual Studio, VSCode, Postman, BitBucket, TeamCity, Jira, Miro

Soft skills: Paired programming, technical communication, agile and SCRUM methodologies.

Projects

Badminton Scoring Platform with Next.js, Prisma, Supabase, (March 2026-present), [Repository](#)

- Recently began developing a full-stack platform to help badminton clubs track players and match data, enabling smarter game suggestions based on player skill levels.
- Using this project to further deepen my knowledge of React by simultaneously taking an online course, implementing newly discovered concepts as I proceed.
- Started work on this as my own badminton club has struggled finding a fitting system.

Gym App with Next.js - Front-End, (Dec-Jan 2023), [Repository](#)

- Led the front-end development of a gym app using Next.js, Tailwind, and Prisma, enabling users to track and share their gym progress.
- Quickly adapted to new technologies and increased responsibilities after a teammate left post-planning, re-organising workload and ensuring project delivery.

Education - University of Bath, 2019–2023, Physics BSc, 2:2

- High 2:1 in final year project: "Can a full-scale vehicle be dynamically modelled as a small-scale vehicle?"
